Missing “Where” information from Google Calendar synchronized to LDS stake calendar.

Re-generated link yesterday.

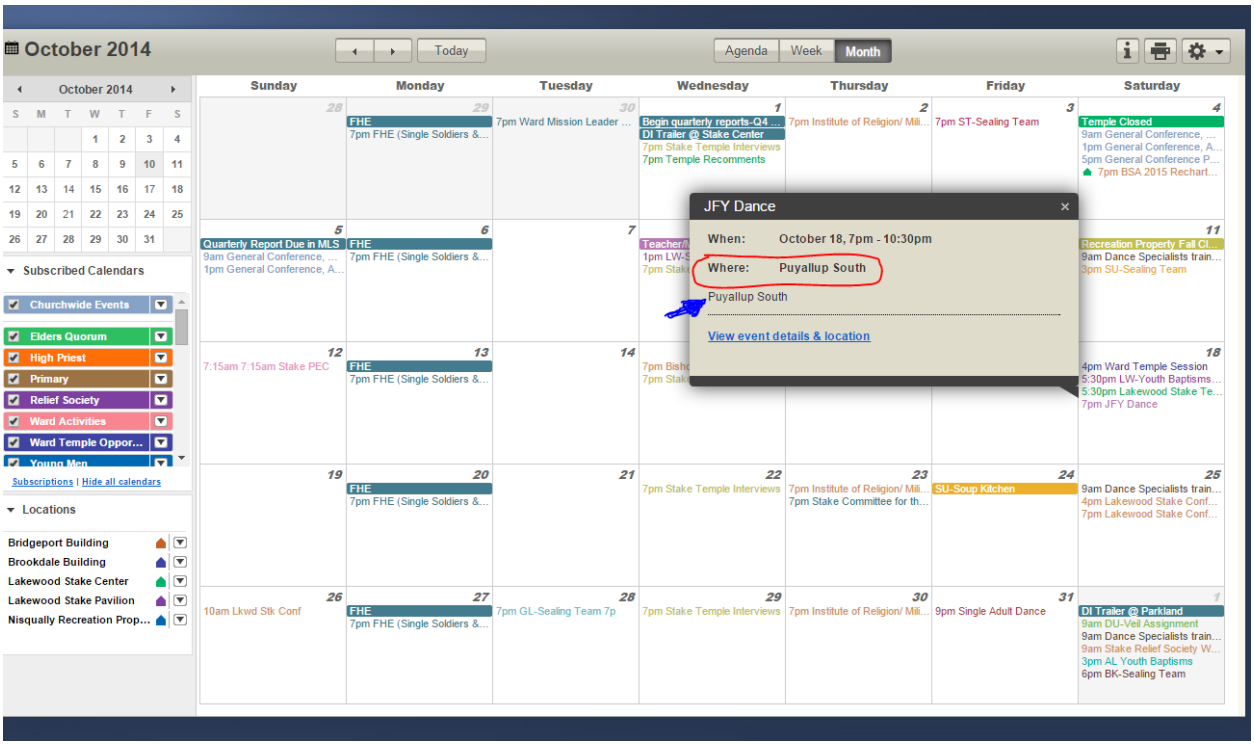

Screenshot of synchronized lds.org calendar to Google Calendar. Note dance event as example .

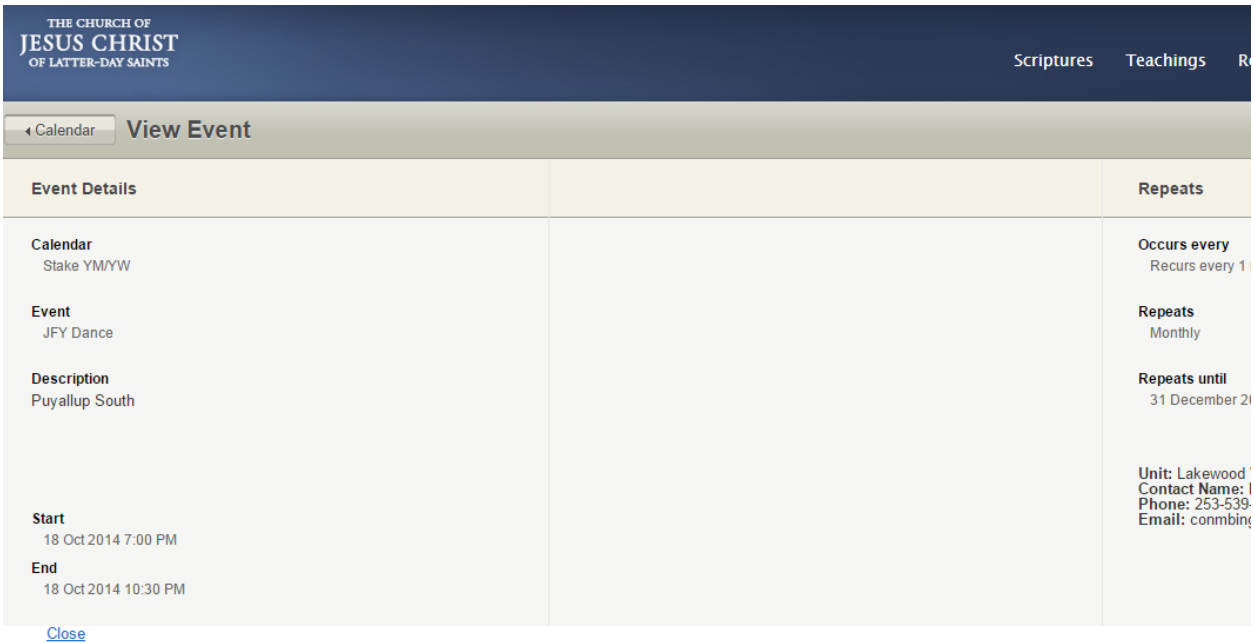

Clicking on the circled Google Calendar event to show ‘details’ produces the screenshot below. Still no location info. … in other words the “Where” (location) is not included.

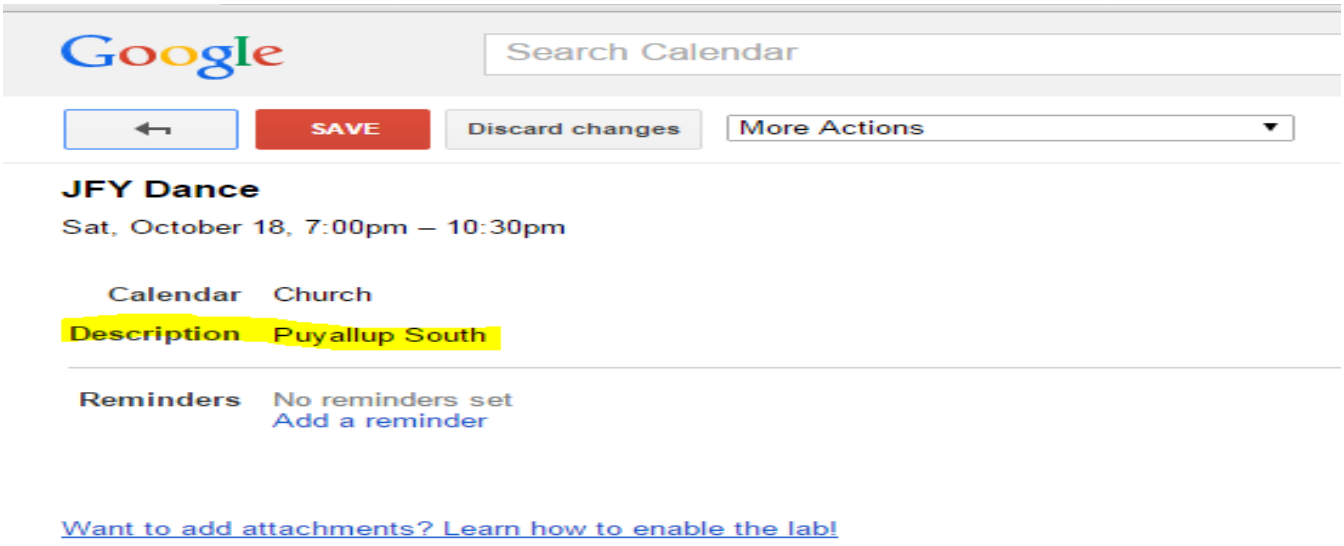

Yet from the LDS.org “Church – Calendar” site (circled below) displays the ‘Where’ (location) information as entered.

Note: The Blue Arrow above indicates that I had the authorized stake web person add the location info to the “Description” field as an intermediate fix. [related Event ‘details’ screen below.]

Placing the location info into the Description field allows the needed location info. to be available on Google Calendar. This work around works on both PC browser and Android smartphone Google Calendar app.

Those people I know who are using iPhone haven't report this problem.

Seems to be tied to the LDS calendar fields being published and what Google Calendar reads in.

Google Calendar smartphone app version 20140414

Browsers tested on Windows 7:

Crome 38.0.2125.101 m

Internet Explorer (10 or 11)

Not urgent but there might be others struggling with this "missing" information also.
