Translation Phone for Zoom - Stake Conference

The proposed Set up, would allow for (1) one language to be streamed into Zoom account. This is a choice by individual logged into the meeting. A separate document can be prepared to help individuals set up.

The Standard Stake conference meeting , or any meeting can be used when the interpretation option is turned on. This is the same as what has been used in the Spanish Ward meetings.

There is a small delay in much the same as live translation.

The only requirements are strong wifi signal for the on line processing. This translation can be located anywhere ! and does not need to be in the building.

This requires at least (2) Zoom accounts to be using the stake internet account. From my testing this should be OK as long as we turn off for members during the meeting.

* This does mean individual that wish to listen to the translation will need to use their own data for the meeting. Video can be turned off to minimize data use.

An improved internet package would be required if we allow individual to connect, or if we add more languages to the Meetings. 2 -3

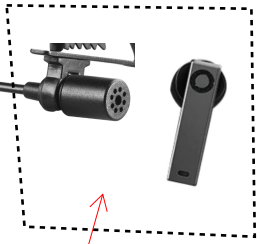

(All Text generated from the meetings is stored in the Main local unit only. This can be down loaded if desired.)

Translation Phone for Zoom - Stake Conference

Phone set up as interpretor into Standard Zoom Account

Foam holder - for Bluetooth ear bud and Mic for Zoom translation input

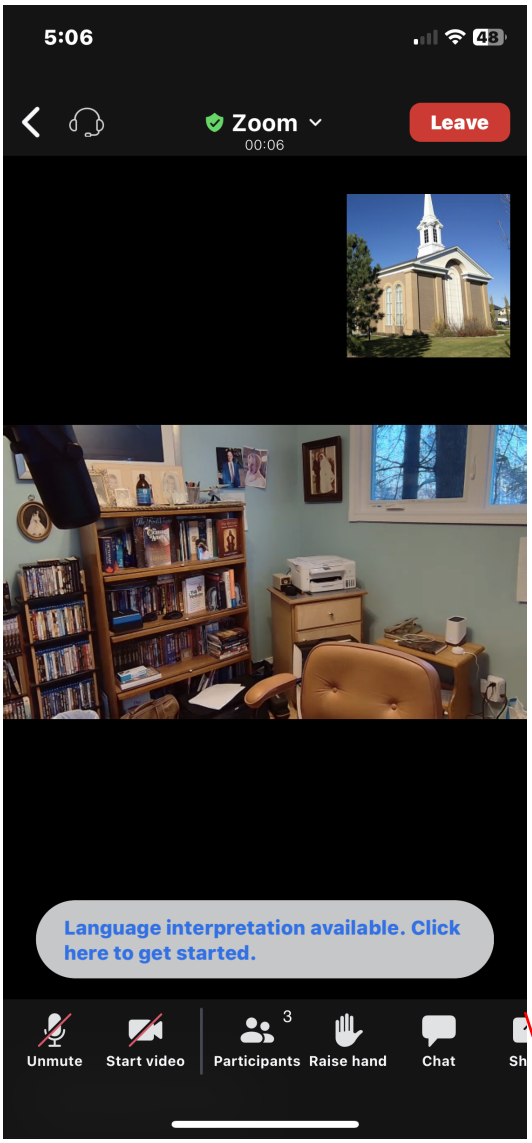

X1 device

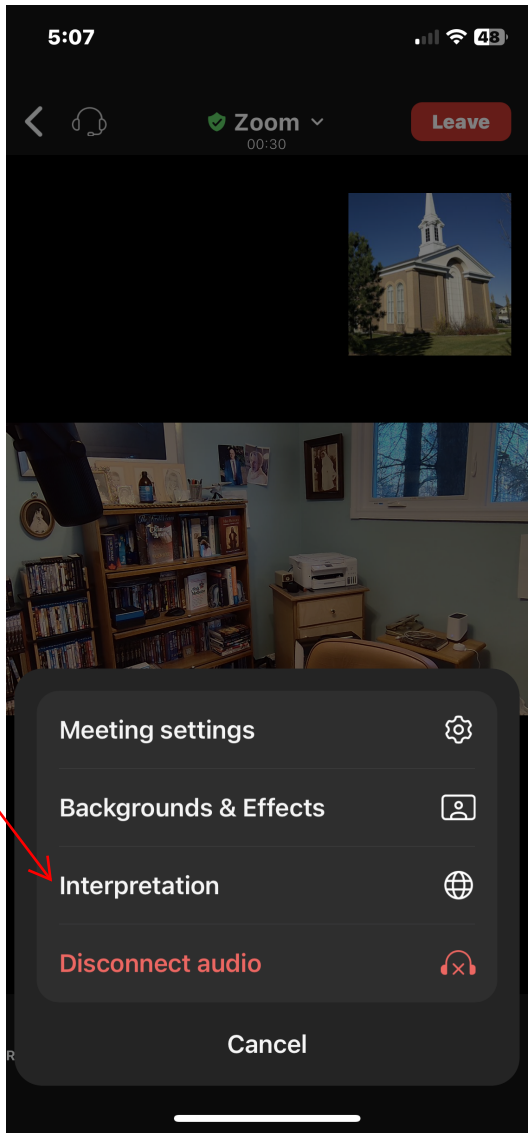

one of several monitor points for langauge chosen

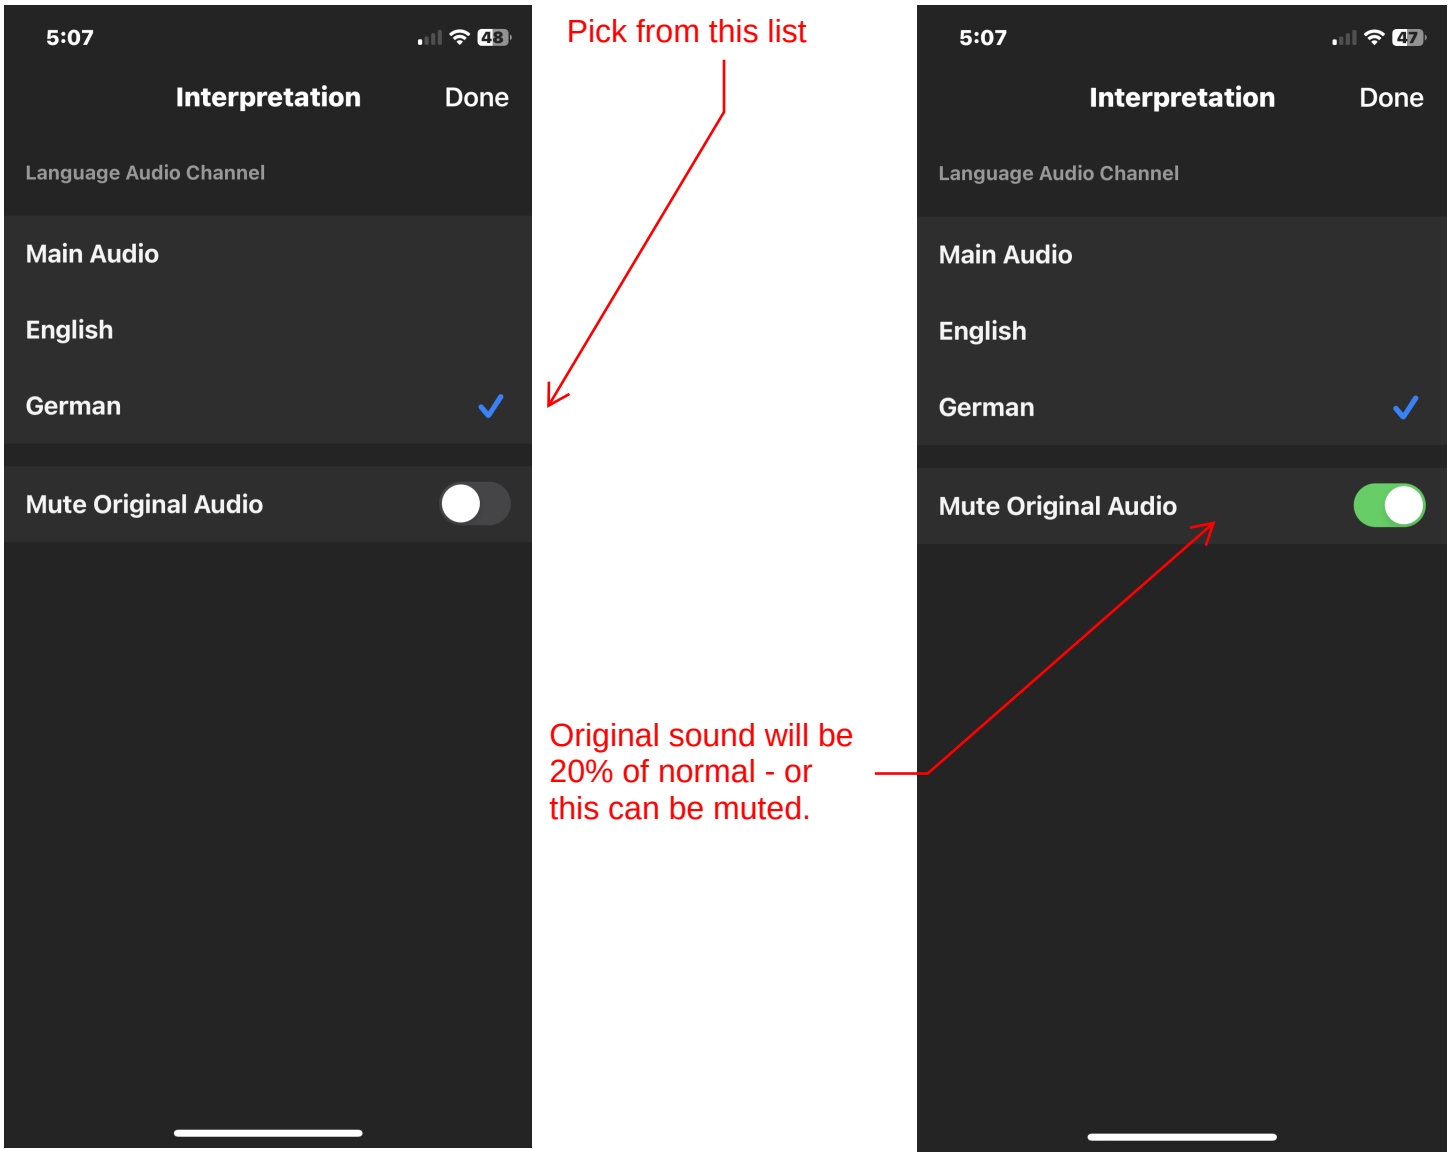

Step by Step in Iphone to turn on Other languages as preferred
